

DAY ON A PLATE

GUIDE FOR 7-12 MONTHS

OVERVIEW

This guide to the food groups and serving sizes is not prescriptive advice and is a broad overview based on servings sizes for this age. It has been developed to provide a general idea of portion sizes and recommended number of serves of each food group to allow you to introduce variety into your baby's food. You do not need to weigh or measure your baby's food in any way. Let them guide you on their portion sizes.

It's important to remember that each child is different and unique and will have individual energy requirements, and they will eat different amounts of food and this is ok and normal. The quantity a child eats will vary greatly day to day.

A sample daily food pattern for infants aged 7–12 months is shown in the graphic above. This is a guide only as individual needs may vary. As you would expect, infants progressively increase the volume and variety of foods they eat during 7-12 months of age. Appropriate growth and development will help to indicate whether food intake is at a suitable overall level for each individual infant.

If you are concerned about your baby's eating please contact a paediatric dietitian or your doctor for care and advice.
